Notes: We define extreme poverty as measured using the \$1.25 (PPP 2005) extreme poverty line. Purchasing power parity (PPP) prices are the rate at which a country's currency would have to be converted into that of another country to buy the same amount of goods and services in each country. PPPs are constructed by comparing the cost of a common basket of goods in different countries. Depth of poverty is a measure of the average gap in incomes for people living below the poverty line spread across the population of the whole country, expressed as a percentage of the \$1.25 a day poverty line. 'Domestic public resources available' refers to the total non-grant revenue either collected or projected to be collected by the government in the financial year 2014.
